

## Canister disposal

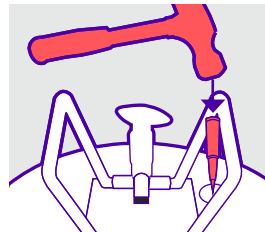

Once the canister is empty, ensure a new canister of adhesive is available before removing the gun and hose.

### STEP 1

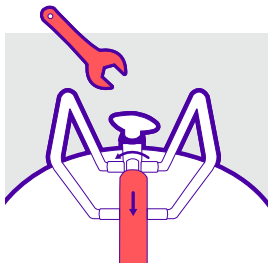

Pull trigger on the gun to fully release remaining pressure and adhesive from the canister. Wait until no more adhesive flows from the gun

before continuing.

### STEP 3

Using a hammer and punch, punch a hole in the small disc next to the canister carry handles.

### STEP 2

Unscrew the hose from the empty canister and attach to the new canister immediately. If the hose is not attached to the new canister quickly,

the adhesive in the hose will cure and block the hose rendering it unusable.

The canister can be recycled as waste metal at a suitable metal recycling facility, subject to local regulations and rules.
